**Abstract** tbw

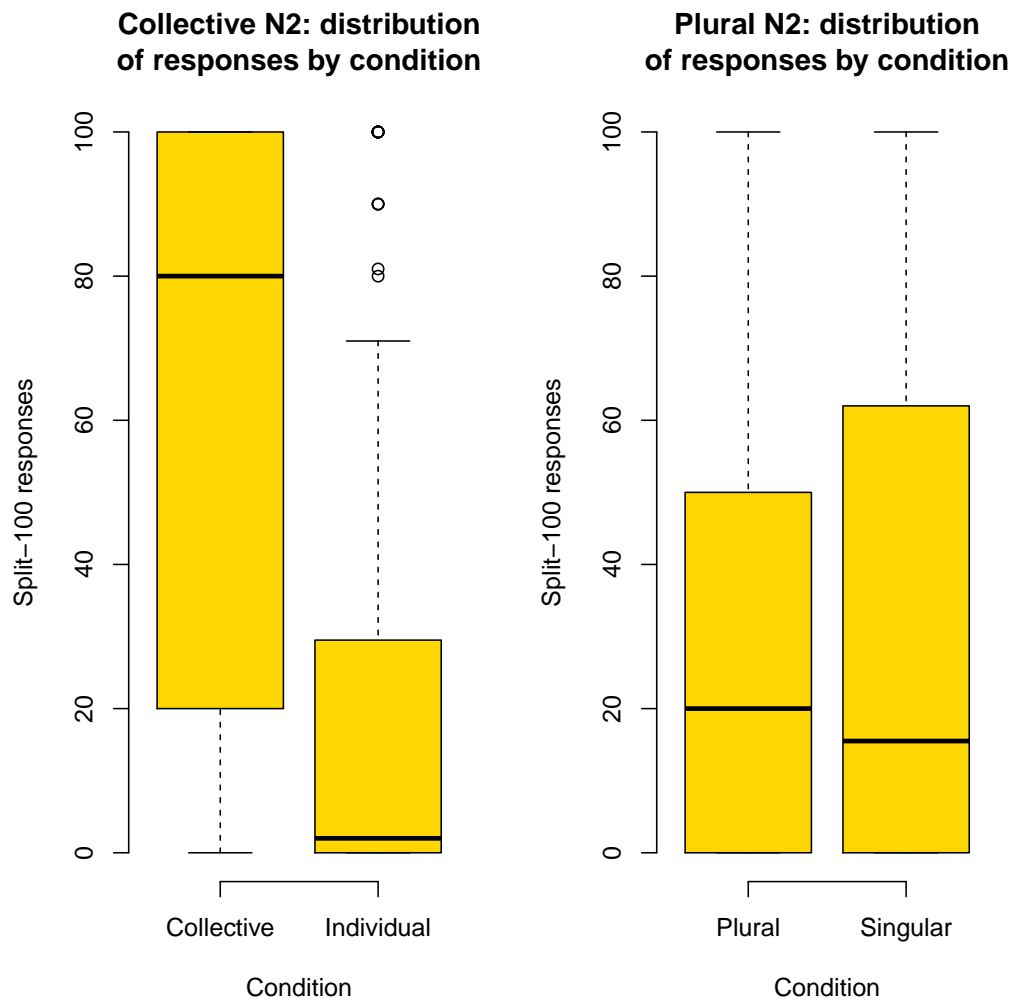

**Keywords:** usage-based grammar, word formation, linking elements, split-100 experiments, corpus data, German

## 1 The status of linking elements in German N-N compounds

Bibtest: [Gelman & Hill \(2006\)](#)

## Acknowledgments

We would like to thank (in alphabetical order) Ulrike Sayatz for valuable discussions and comments. Furthermore, we thank Ulrike Sayatz for helping us to recruit the participants for the experiments. We are fully responsible for all residual adequacies, errors, and omissions. Roland Schäfer's work on this project was funded in part by the *Deutsche Forschungsgemeinschaft* (DFG, personal grant SCHA1916/1-1).

**Figure 1:** Descriptive results of the split-100 experiment.
